EXHIBIT A (SCOPE OF WORK)

The Tampa Convention Center (TCC) Facility Capital Improvement Plan is comprised of a variety of identified design projects to improve building infrastructure and physical plants as well as continuously improve the overall health, safety and welfare of our workers and the general public who utilize or visit the facilities that are owned and operated by the TCC.

This project will accomplish that goal by providing a Facility Condition Assessment that will identify the existing conditions of each area and a Facility Capital Improvement Plan that will describe in detail the costs and improvements required to bring TCC to current life safety, health, code compliance, environmental and energy standards over the next 5, 10, and 15-year intervals. Items to address for the 15-year interval will include, roofing systems, curtain walls, carpeting, floor tile, painting, lighting, windows, elevators, escalators, fire protection and detection systems, security systems and utilities such as electrical and emergency power systems, HVAC, AHU's, sanitary, distribution systems, as applicable. Cost estimates will be included for the infrastructure improvements that will be needed to make the connections to those systems.

The Tampa Convention Center is an approximately 32-year-old facility totaling 200,000 sq. ft. of Exhibit Space and 36,000 sq. ft. of Ballroom with 52 Breakout rooms.

The TCC Facility will be inspected, and components will be evaluated for physical condition, life expectancy, renovation or replacement requirements, and expansion needs. Based on these findings, the Assessment Team will recommend the improvements for each building and a summary table will be prepared that will itemize them by priority based on life safety, health, code compliance, environmental and energy issues.

Recommended improvements will have associated costs. The costs will include construction costs, consultant design and construction administration fees, Roof Monitor fees, Construction Management Firm (CMF) fees (if recommended), testing costs, affirmative action, management fees, contingencies, permits, allowances, and escalation factors for the anticipated construction year of the recommended facility improvement.

During inspection, identify immediate health and safety situation and if found, the Assessment Team will notify TCC's PM on an immediate basis (and if not possible, not more than one hour after discovery).

Prepare a cost format for recommended improvements for review and approval by TCC. The cost budgets will include, construction costs, design and construction administration fees, Roof Monitor fees, Construction Management Firm (CMF) fees (if recommended), testing costs, affirmative action, management fees, contingencies, permits, allowances, and escalation factors for anticipated construction year of the recommended facility improvement. It is understood that the approved format established for budgeting costs in Phase 2 will be used throughout subsequent phases of study.

Evaluations of each building will include location, photographs, floor plan notations (in a reduced scale: 11 x 17 folded format, with overall dimensions for perimeter footprint and interior room sizes) evaluations of each building will include descriptions of: use group, construction classification type, and current building occupancy vs. design capacity, leased/owned,

architectural characteristics, number of stories, gross area in square feet and for each floor, date of construction, and estimated useful life.

I. Structural Engineering:

- i. Structural engineers will walk the site and will limit the condition assessment to exposed portions of:
 - The roof structure
 - The freight area
 - The cooling tower dunnage
- ii. These areas are excluded from the condition assessment:
 - The two-story parking garage.
 - The ground level retail areas
 - Structural system exterior to the building including but limited to slabs, ramps, site walls, planter walls.

For structural evaluation, no probing, destructive testing, sounding, or other means of exploration other than visual inspections will be performed in this limited condition assessment. No repair plans or specifications will be included in the scope of the work. No preparing recommendations or specifications for temporary shoring of potentially unsafe conditions will be included in the scope or work.

A description and condition of the buildings' interior elements including carpeting, floor tile, paint, storage space and handicapped accessibility. Evaluate each building as to the Use Group, construction classification, and their conformance to current codes, life safety and health standards. Survey the building attic spaces, crawl spaces. Based on this information, provide a list of recommended upgrades and their associated costs.

A description and condition of the existing building utilities and operational systems including the age, capacities, nameplate data. Recommend upgrades for each utility and operational system described below and prepare a table that will list them by priority based on life safety, health, code compliance, environmental and energy issues. All recommended upgrades will have associated costs. The costs will include construction costs, A/E fees, contingencies, allowances, permit fees, and escalation factors. The utilities and related systems will include the following:

i. Lighting:

Identify non- LED lighting fixture(s) for each building. Provide a unit price for each type of new fixture recommended.

ii. Fire Protection Systems:

Visually inspect existing exposed fire protection systems and make recommendations where code compliance, age, noticeable visual deterioration or deterioration may be. Catalog existing fire protection pumps, overall existing in-service life of fire protection system and make recommendations for replacement including costs associated.

iii. Plumbing Systems:

Catalog and survey the building, lavatories, bathrooms, laboratories and other areas utilizing domestic water and determine the number and type of units scheduled to be converted to sensor operated flushometers. Visually survey, by strategic sampling, the exposed piping systems throughout the building to determine if there are missing or deteriorated sections of insulation or noticeable water leaks. Provide a unit price per linear foot of each new pipe insulation size recommended. The actual lengths of pipe insulation to be replaced are not required for each building.

iv. Heating Ventilation and Air Conditioning Systems:

Describe the type, age and manufacturer of the heating/cooling systems and controls used for each building, the fuel source and type, equipment location, air handler intake locations, age, capacities and nameplate data where available. Visually identify, where allowable, the condition of the associated ventilation system components such as exhaust fans, preheat coils, dampers, ductwork, registers, etc. Identify the types of temperature control systems used in each building and provide recommendations that may improve operations. Provide a unit price for each type of new temperature control system recommended.

v. Electrical Systems:

Identify the name of the electric service provider as well as the existing capacity of the primary and secondary electric service to the facility. An assessment has already been completed of main switchgear equipment and only other panels and MCC should be listed. List the electric service equipment and age. Identify the existing capacity of the service equipment, transformers, switchgear, main disconnect, service feeders, circuit breakers, distribution panels, and evaluate the capacity for expansion considering present peak loads and future demand requirements. Visually inspect, by strategic sampling, and review the existing electric system for code compliance and identify upgrades with related costs. The TCC Project Manager will make arrangements to provide assessment team to access electrical panels, closets, rooms, and other areas required for the Electric Service Survey. Describe the existing electric distribution system. Survey and visually inspect each building to identify the age, condition and manufacturer of the emergency back-up power equipment and related components serving that building. Based on the age and condition of the emergency power systems, make recommendations for upgrades and include related costs. For those facilities that do not have an emergency back-up power system or an emergency back-up power system that cannot handle the load of the entire facility, make recommendations for the replacement or installation of new emergency back-up power equipment and the related costs.

vi. Water Distribution Systems:

Survey and visually inspect the existing exposed water distribution system for deterioration, degradation or noticeable leaks. Make recommendations for replacement of components at or approaching their useful life. Describe the demand flow associated with existing systems and how it compares to the building service.

vii. Sanitary and Vent Systems:

Describe the existing sanitary and vent system and identify through strategic sampling and maintenance logs areas of deterioration, leaks, or drainage issues. Identify main line sizes, existing expected demand flows and evaluate the system for current and future demand and usage.

viii. Storm Drainage Systems:

Survey and visually inspect the existing exposed sanitary distribution system for deterioration, degradation or noticeable leaks. Make recommendations for replacement of components at or approaching their useful life. Describe the demand flow associated with existing systems and how it compares to the building service. Identify water infiltration into the system and costs to remediate. Identify storm drains that are connected to the sanitary lines so they may be disconnected in the future.

ix. Security Systems:

Survey and visually inspect the existing security system Identify the existing system for their useful life and their capacity for future expansion.

x. Energy Management Systems:

Identify and evaluate each building Energy Management System (EMS) and related Components. Make recommendations for new EMS systems if none are provided or do not meet current technology standards.

xi. Vertical Transportation Systems:

The consultant will seek to identify if there are specific requirements and coordinate our site visit. The consultant will also review vertical documentation available such as maintenance contracts, call logs, repair proposals etc., that have been provided within the last two years. Once the site visit date is confirmed, the consultant's personnel will perform an assessment of the elevators and escalators. A mechanic will be required to be on site to assist with the opening of the escalators and provide access to the machine rooms and elevators. Consultant's comprehensive report will include a detailed summary with an equipment profile, maintenance upkeep, and deficiencies for elevator / escalator items. Furthermore, the consultant will review the current code and standards of the Authority Having Jurisdiction (AHJ) and provide recommendations for capital improvements based on 1-2 years, 3-5 years and 5-10 years. Consultant will prioritize its results with short-term and long-term recommendations based on the status and age of the equipment. Firm's maintenance of insurance coverage as required herein is a material element of the Agreement and the failure to maintain or renew coverage or provide evidence of same (defined to include without limitation Firm's affirmative duty to provide from time to time upon City's request certificates of insurance, complete and certified copies of Firm's insurance policies, forms, and endorsements, information on the amount of claims payments or reserves chargeable to the aggregate amount of coverage(s) whether during the term of the Agreement or after as may be requested by the City in response to an issue or potential claim arising out of or related to the Agreement to which Firm's insurance obligations hereunder may apply or possibly help mitigate) may be treated as a material breach of the Agreement. Should at any time Firm not maintain the insurance coverages required, City at its sole option (but without any obligation or waiver of its rights) may (i) terminate the Agreement or (ii) purchase such coverages as City deems necessary to protect itself (charging Firm for same) and at City's option suspending Firm's performance until such coverage is in place. If Firm does not reimburse City for such costs within 10 days after demand, in addition to any other rights, City shall also have the right to offset such costs from amounts due Firm under any agreement with the City. Firm acknowledges and agrees Firm and not the City is the party in the best position to determine applicability (e.g. "IF APPLICABLE"), confirm, and/or verify its insurance coverage. Acceptance by the City, or by any of its employees, representatives, agents, etc. of certificates or other documentation of insurance or policies pursuant to the terms of this document and the Agreement evidencing insurance coverages and limits does not constitute approval or agreement that the insurance requirements have been met or that coverages or policies are in compliance.
